

Sewer Assassin Instructions

Only for use with rodenticide bait block labeled for sewer application.

Tools/items necessary for installation: channel locks, wire cutters and latex gloves.

Pictures of all parts: (A) Cap, (B) vertical application post, (C) horizontal application post, (D) wire.

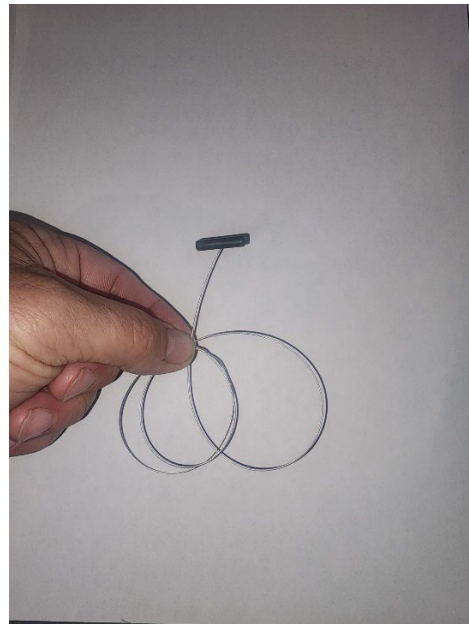

(A) Cap

(B) Vertical application post

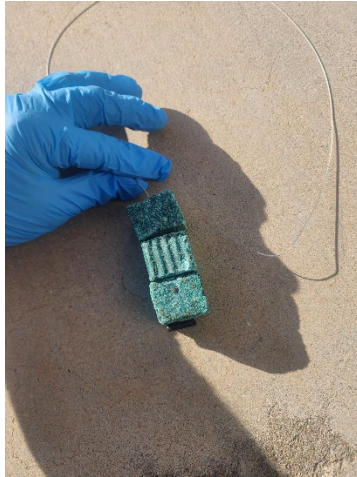

(C) Horizontal application post

(D) Wire

Vertical application

String steel braided wire through properly labeled rodenticide (D). Lower bait into clean out until touches bottom of horizontal pipe. Pull wire up with rodenticide attached approx. 2"-3" then attach wire to post (B). Cut excess wire (D). Secure cap (A) to top of clean out. (Do not attach wire to part (C) while using this application)

Horizontal Application

Screw threaded post (D) into device. Determine depth of pipe inside void to adjust post depth located on cap labeled part (A) so cap can be reinstalled and secured with no obstruction. Slide rodenticide on post making sure it is out of water/waste flow in vertical pipe attached to fixture. Secure cap (A) to top of clean out making sure snug and tight.

.

Disclaimer.

Sewer Assassin is manufactured for use in sewage and plumbing lines only by pest control professionals. Its sole purpose is to control and monitor rodents within the sewer system to mitigate entry to structure through deteriorated, improperly installed, or faulty plumbing systems. Any use of this product outside of these instructions and label is prohibited.

Always review your local laws and regulations before using this product.

Use is prohibited in the states of New York and California
